

**Clean Copy of Amended Claims**

1. A copper clad laminate coated on both sides with copper foils of different thicknesses, wherein a first copper foil on one side of said laminate has the property of not being recrystallizable under the conditions that exist during a hot pressing step in the manufacture of said laminate, and a second foil on the other side of said laminate that has the property of being recrystallizable under the conditions that exist during a hot pressing step in the manufacture of said laminate and is thicker than said first foil.
2. A copper clad laminate coated on both sides with copper foils of different thicknesses, with a first copper foil on one side of said laminate and a second foil on the other side of said laminate, wherein said second foil has the property of being more recrystallizable than said first foil under the conditions that exist during a hot pressing step in the manufacture of said laminate, and wherein said second foil is thicker than said first foil.
3. A copper clad laminate coated on both sides with copper foils of different thicknesses, with a first copper foil on one side of said laminate and a second foil on the other side of said laminate, wherein said second foil has the property of contracting more than said first foil under the conditions that exist during a hot pressing step in the manufacture of said laminate, and wherein said second foil is thicker than said first foil.
